PRODUCTION PROCEDURES	Antiserum was solid phase adsorbed to ensure class specificity. Antiserum was cross adsorbed using human, mouse and rat immunosorbents to remove cross reactive antibodies. The antibody to rabbit IgM was isolated by affinity chromatography using antigen coupled to agarose beads.	
	Antibody concentration was determined by extinction coefficient: a 1.4 equals 1.0 mg of IgG.	absorbance at 280 nm of
	By immunoelectrophoresis and ELISA this antibody reacts specifica reactivity with IgA and IgG is negligible. No antibody was detected immunoglobulin serum proteins. Less than 1% cross reactivity to h was detected. This antibody may cross react with IgM from other s	against non- uman, mouse and rat IgM
