PRODUCTION PROCEDURES		The antibody was isolated by affinity chromatography using antigen coupled to agarose beads and conjugated to horseradish peroxidase (HRP).				
		Antibody concentration was determined by extinction coefficient prior to conjugation: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.				
		Molar enzyme/antibody protein ratio is 4:1.				
		By immunoelectrophoresis and ELISA this antibody reacts specifically with light chains common to all cat immunoglobulins. No antibody was detected against non– immunoglobulin serum proteins. This antibody may cross react with light chain from other species.				
APPLICATIONS		Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.
