PRODUCTION Antiserum was cross adsorbed using chicken, human, mouse, pig, rabbit and rat

PROCEDURES immunosorbents to remove cross reactive Antibodies. The antibody to goat IgG was isolated

by affinity chromatography using antigen coupled to agarose beads and conjugated to

horseradish peroxidase (HRP).

Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of

1.4 equals 1.0 mg of IgG.

By immunoelectrophoresis and ELISA this antibody reacts specifically with goat IgG and with light chains common to other goat immunoglobulins. No antibody was detected against non-immunoglobulin serum proteins. Less than 1% cross reactivity to chicken, horse,

human, mouse, pig, rabbit and rat IgG was detected.

This antibody may cross react with IgG from other species.

APPLICATIONS Centrifuge tube to remove product from lid. Optimal working dilutions should be determined

experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot 1:5,000 - 1:50,000 Immunohistochemistry 1:200 - 1:5,000 Immunocytochemistry 1:200 - 1:5,000 ELISA 1:10,000 - 1:100,000
