PRODUCTION PROCEDURES	The antibody was isolated by affinity chromatography using antigen coupled to agarose beads and conjugated to DyLight® 594.
	Antibody concentration was determined by extinction coefficient prior to conjugation: absorbance at 280 nm of 1.4 equals 1.0 mg of gG.
	By immunoelectrophoresis and ELISA this antibody reacts specifically with mouse IgG and with light chains common to other mouse immunoglobulins. No antibody was detected against non-immunoglobulin serum proteins. This antibody may cross react with IgG from other species.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.
	Immunohistochemistry 1:40 – 1:400
	Immunocytochemistry 1:40 – 1:400
	Flow Cytometry 1:50 – 1:200
	Immunofluorescence 1:40 – 1:400
APPLICATION NOTES	Not all listed applications have been specifically tested by our laboratory.
	DyLight $^{\circ}$ 594 is excited at 593 (in PBS) and emits at 618 (in PBS).
