PRODUCTIONAntiserum was solid phase adsorbed to ensure class specificity. Antiserum was cross **PROCEDURES**Antiserum was solid phase adsorbed to ensure class specificity. Antiserum was cross
adsorbed using human and rat immunosorbents to remove cross reactive antibodies. The

antibody to mouse IgG was isolated by affinity chromatography using antigen coupled to

agarose beads and conjugated to biotin.

Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of

1.4 equals 1.0 mg of IgG.

By immunoelectrophoresis and ELISA this antibody reacts specifically with mouse IgG. Cross

reactivity with IgA and IgM is negligible. No antibody was detected against non-

immunoglobulin serum proteins. Less than 1% cross reactivity to human and rat IgG was

detected. This antibody may cross react with IgG from other species.

APPLICATIONS Centrifuge tube to remove product from lid. Optimal working dilutions should be determined

experimentally by the investigator. Prepare working dilution immediately before use.
